耳鼻喉疾病創傷及處理

鼻部創傷

1. 軟組織 - 破裂，鼻黏膜損傷 → 鼻出血
 2. 鼻骨骨折 - 鼻樑骨塌陷，偏斜，碎裂
軟組織腫脹
鼻中隔軟骨碎裂，脫位
鼻中隔血腫 → 鼻塞
- ⇒ 傷口處理
⇒ 病史
⇒ 驗查
⇒ X 光
⇒ 復位手術

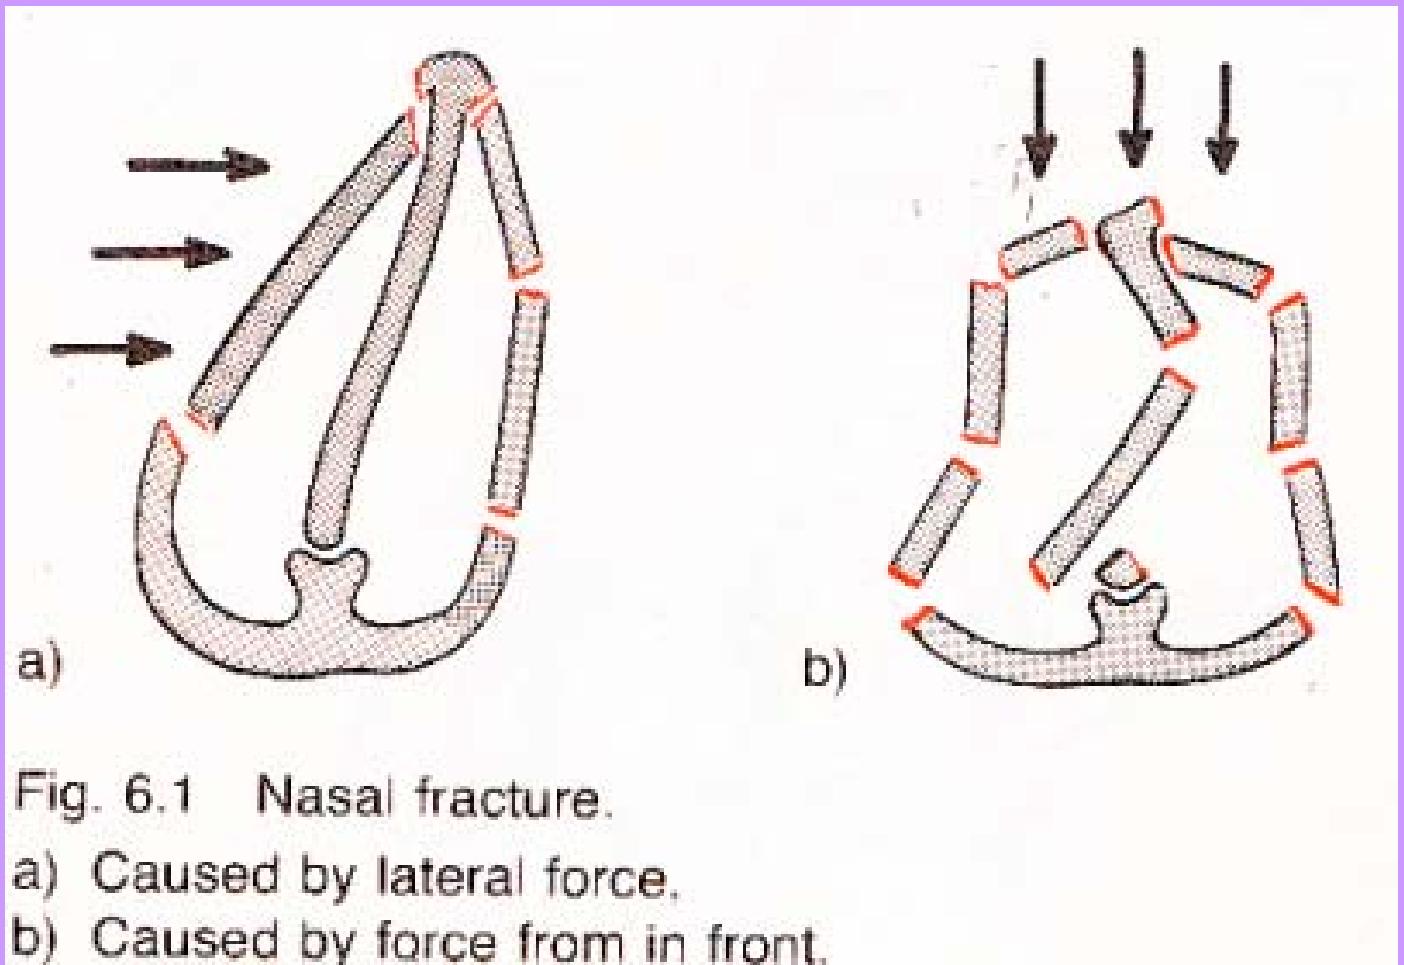

Fig. 6.1 Nasal fracture.
a) Caused by lateral force.
b) Caused by force from in front.

流鼻血的處理

❖ 局部性

- 外力創傷 - 挖鼻，意外，撞傷，骨折
- 鼻中隔血管叢區擴張，容易在碰撞後破裂
- 鼻，鼻咽部的腫瘤

❖ 全身性

凝血機能障礙

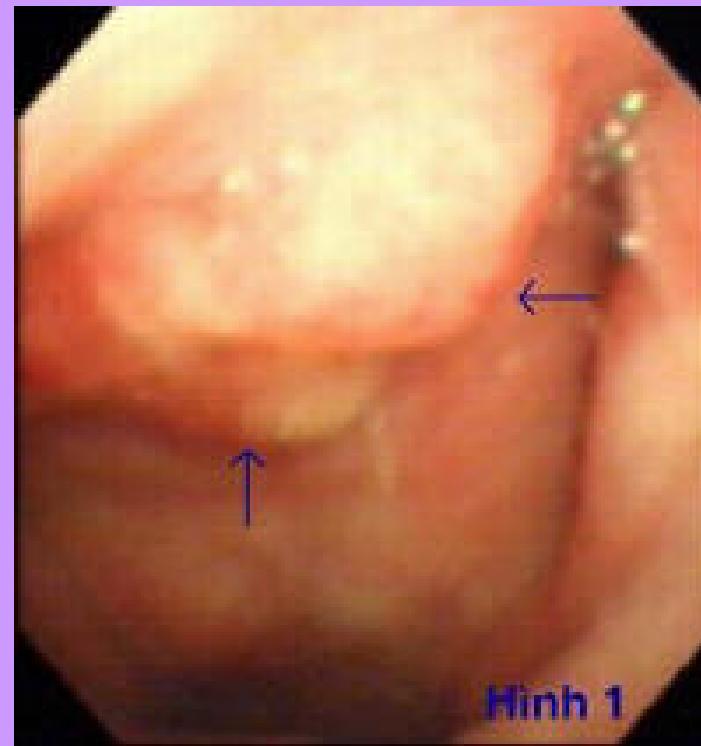

❖ 處理辦法

- 保持鎮靜，冰毛巾敷鼻樑及前額
- 棉花 堵塞
- 雙鼻翼壓向鼻中隔
- 流血量多應盡快找醫生處理

堵塞

鼻咽部的腫瘤

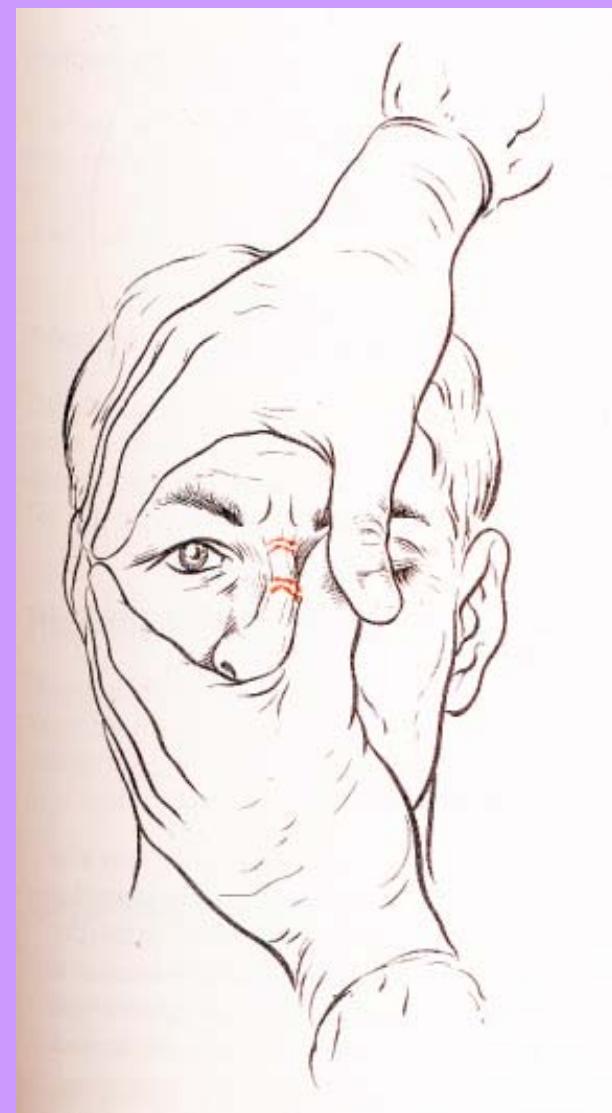

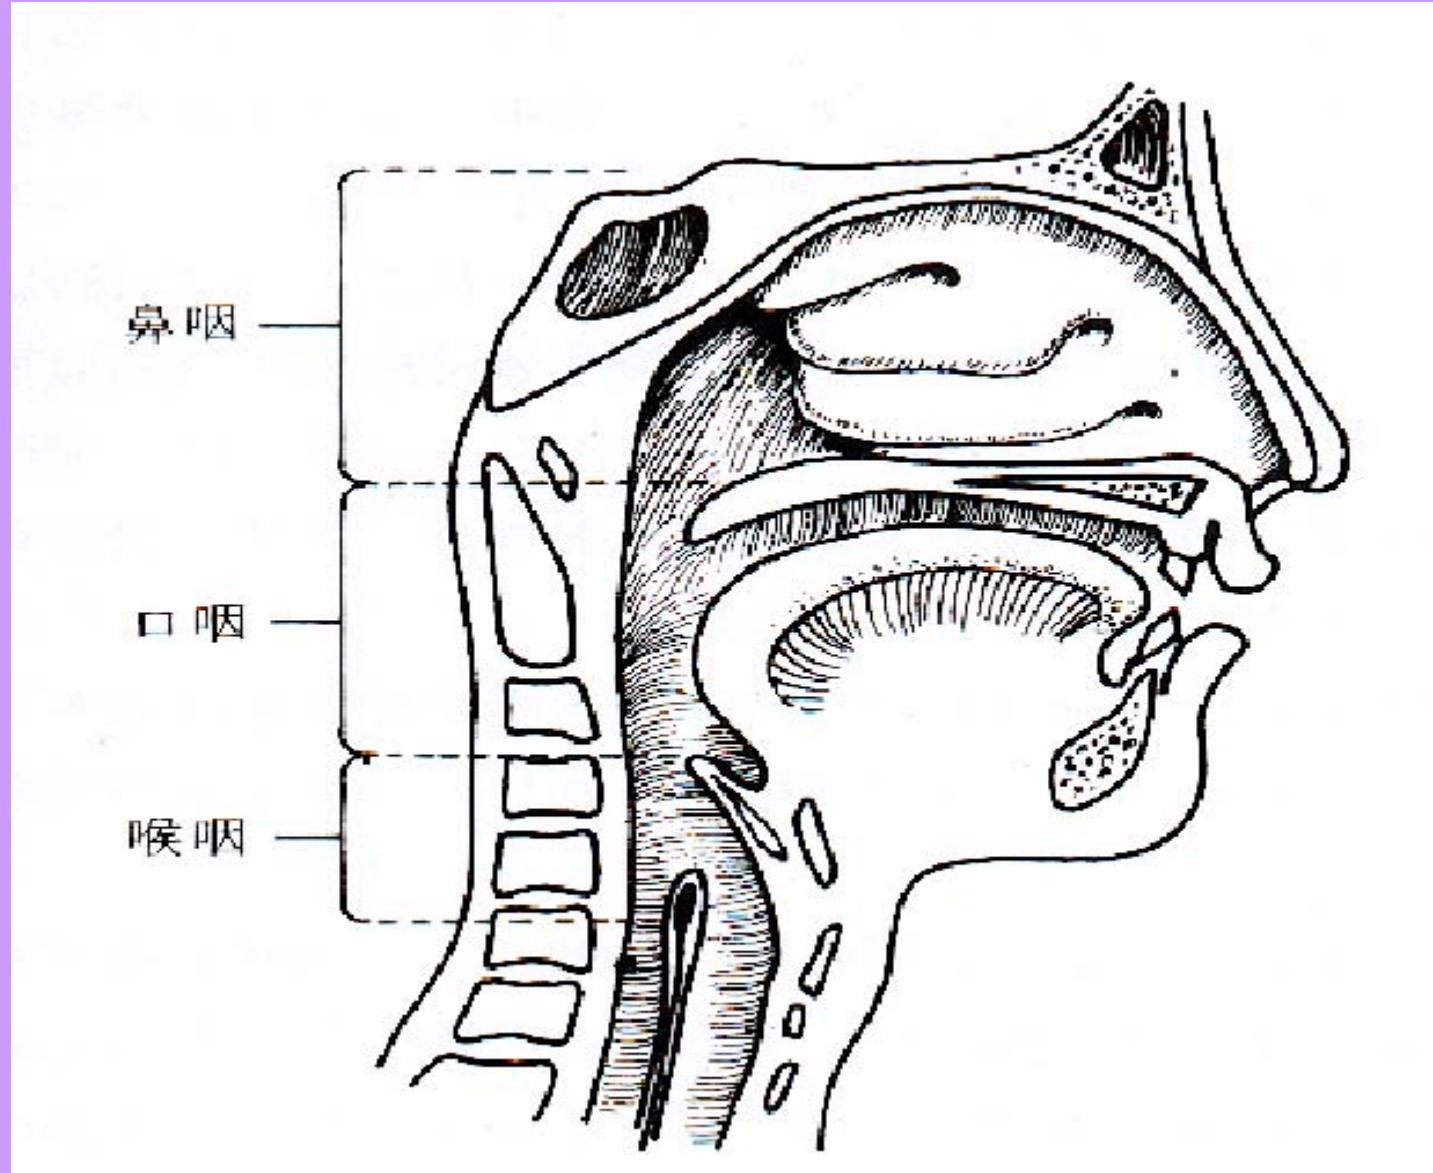

Fig. 6.13

面部創傷

- ❖ 骨折—上頷骨，顴骨，顴骨弓
- ❖ 痘徵—
 - 面部腫起，難於開口及用牙齒咀嚼
 - 眼睛四周瘀傷
- ❖ 急救—
 - 注意呼吸阻塞
 - 包扎傷口
 - 軟墊，繩帶
 - 送院處理

喉部疾病,創傷

喉 — 呼吸道的一部份，發音器官

喉的結構 — 軟骨 (五塊)

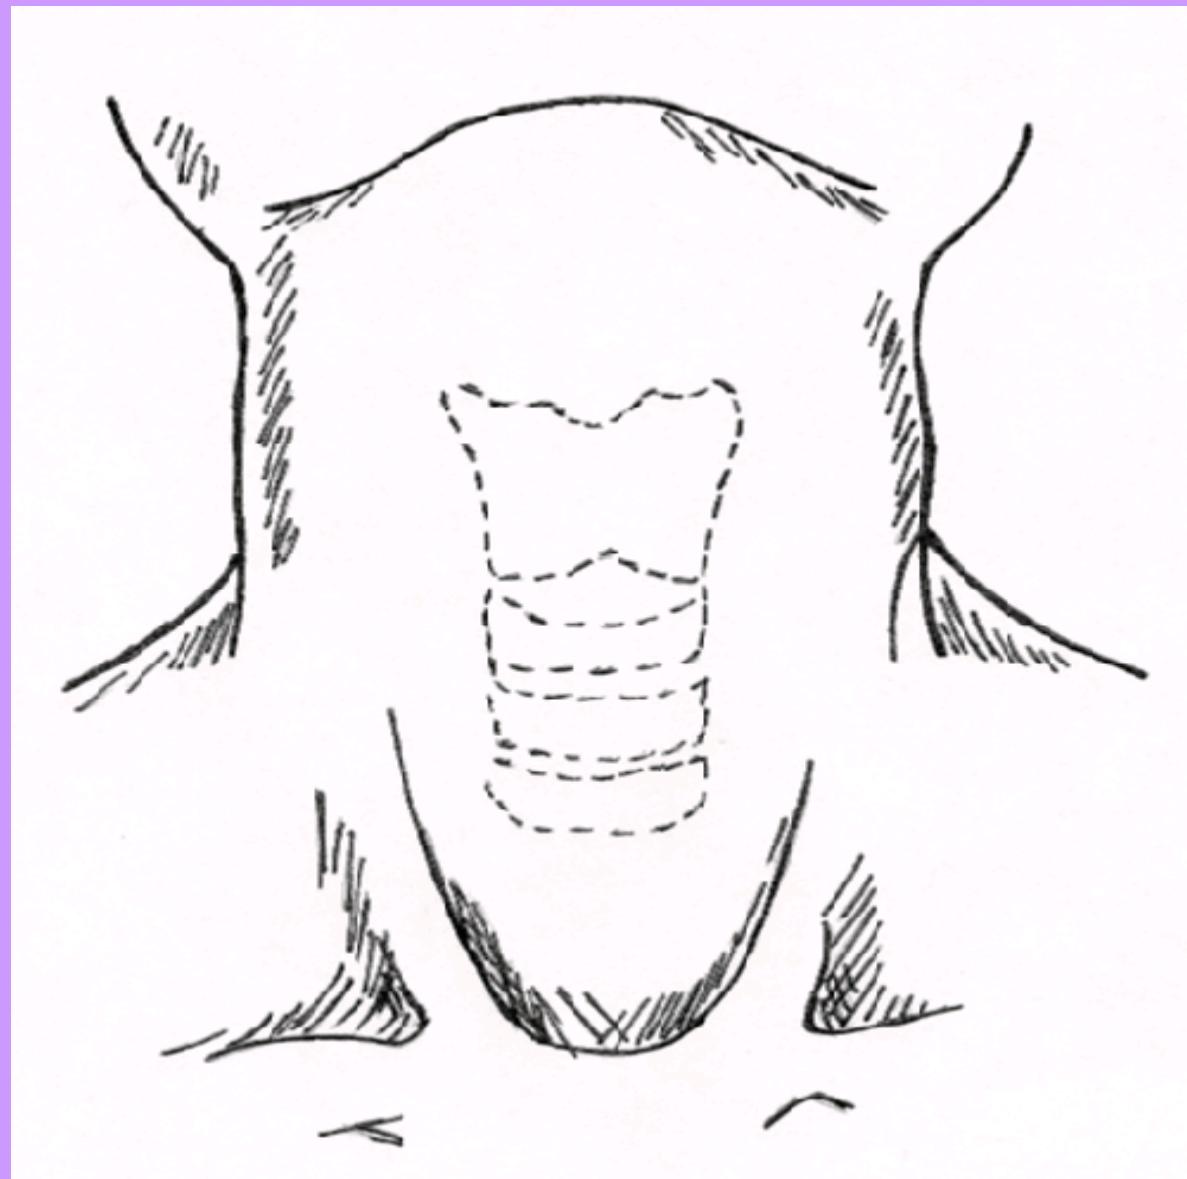

黏膜

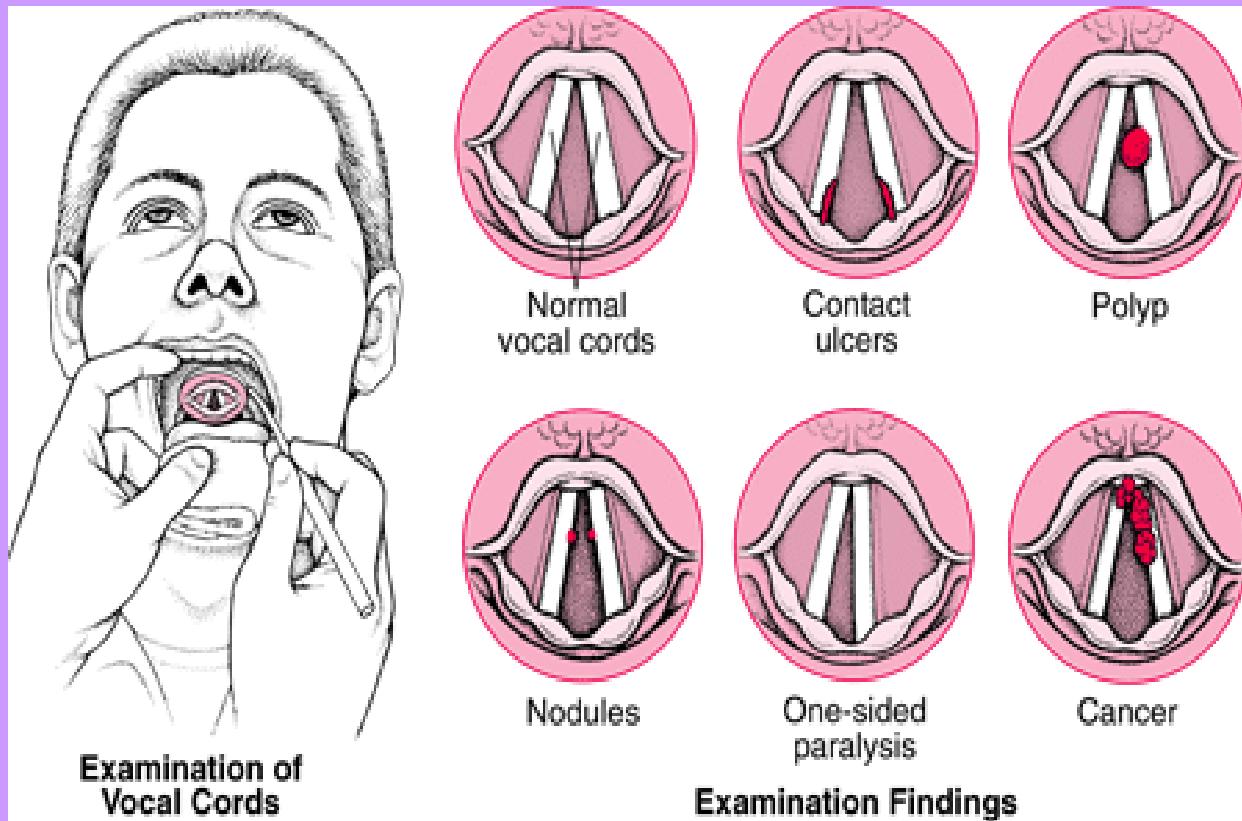

韌帶連接軟骨

肌肉

上接口咽

下接氣管

喉部發炎

- ◆ 痘徵：疼痛
聲音沙啞（黏膜水腫出血）
- ◆ 處理：
 - 減少說話
 - 藥物舒緩

挫傷

撞擊, 交通意外

暴力

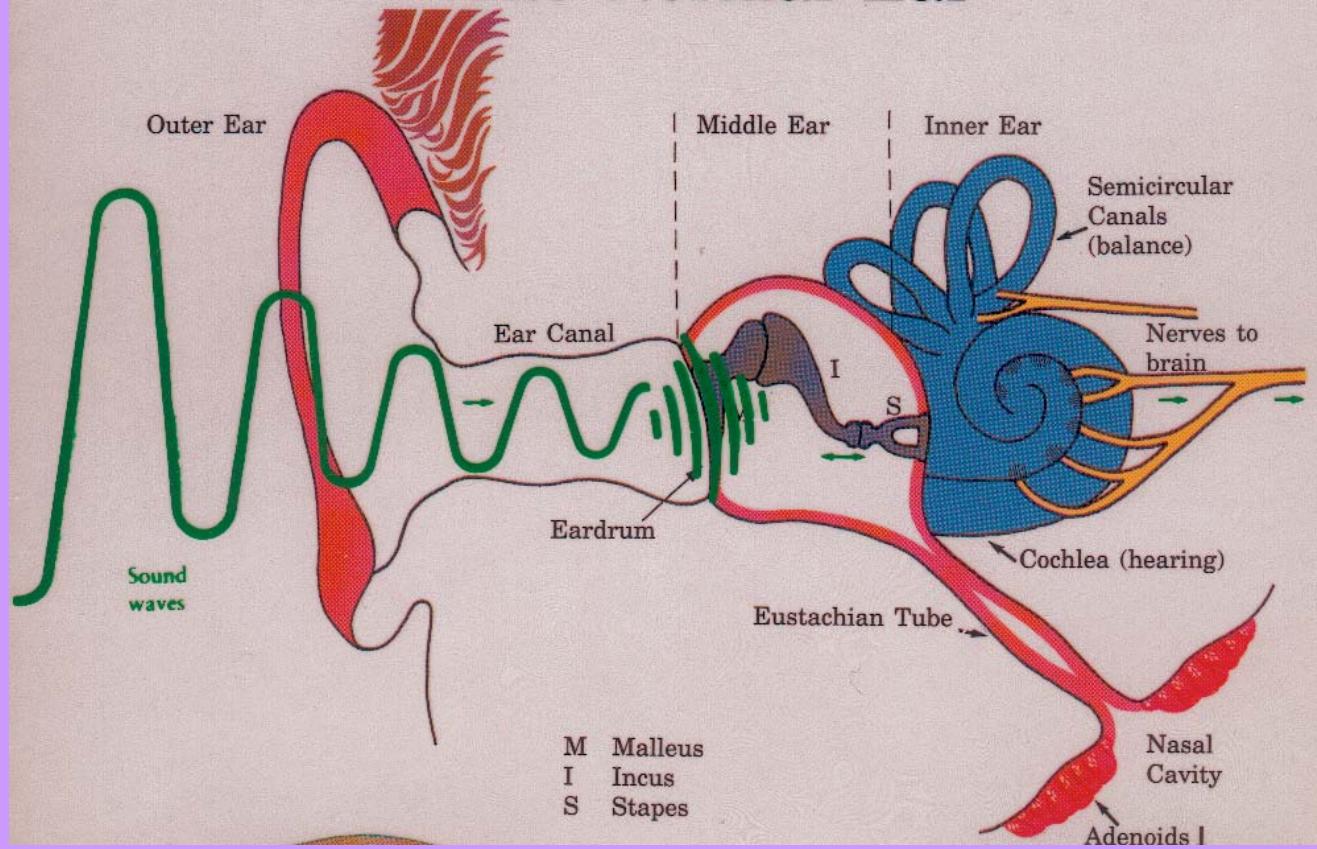

病徵 : 疼痛

- ◆ 聲音沙啞 (黏膜水腫出血)
- ◆ 嚴重軟骨折裂，出現呼吸困難
- ◆ 頸部腫脹，皮下出血或氣腫

送院治理 : 24小時觀察

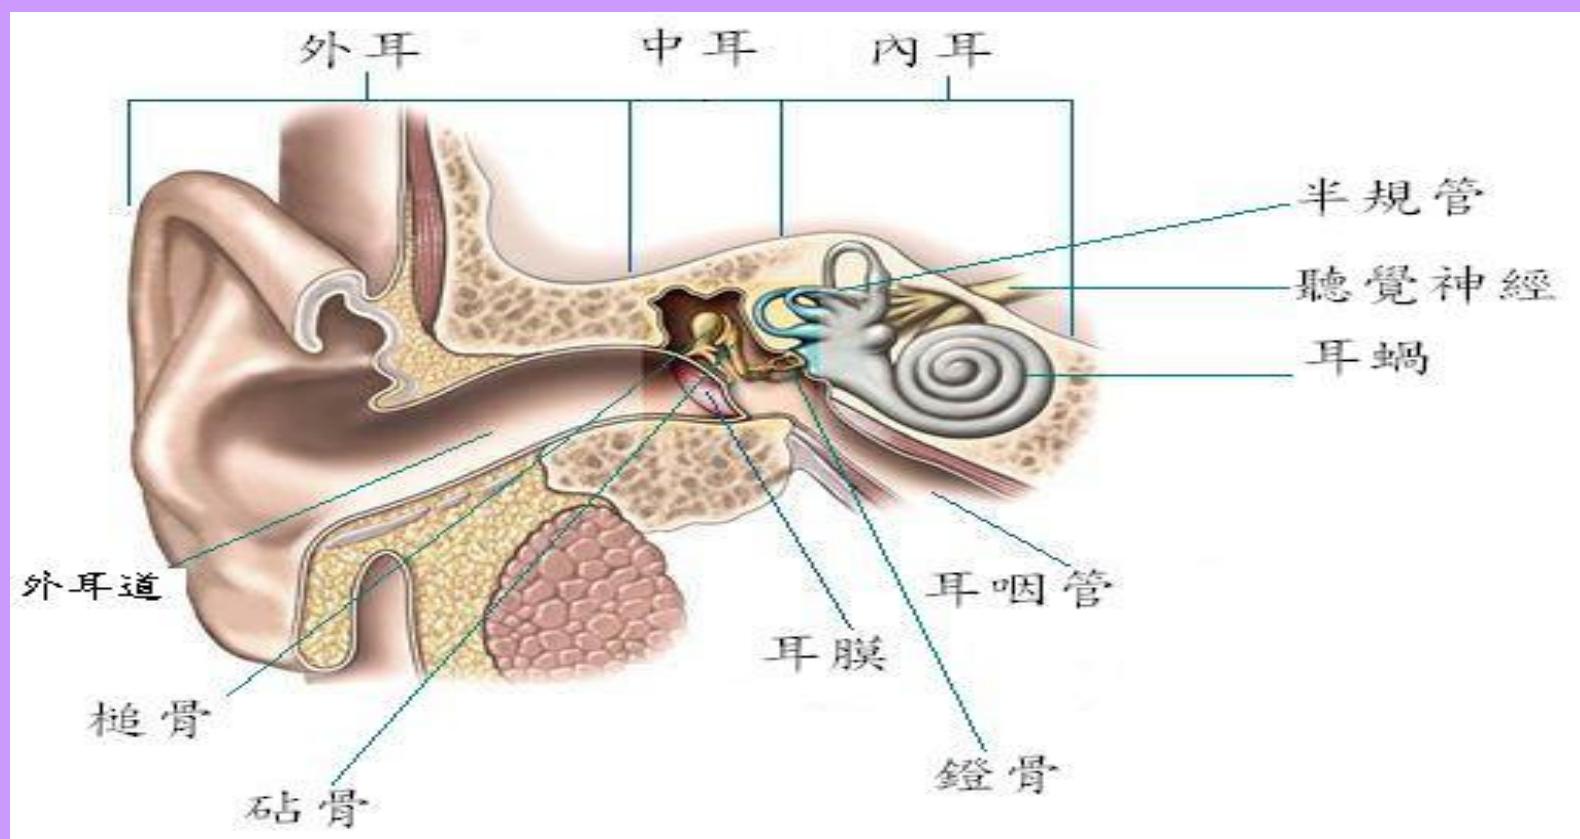

> 嚴重如軟骨折裂，需手術復位及放入喉模

The Normal Ear

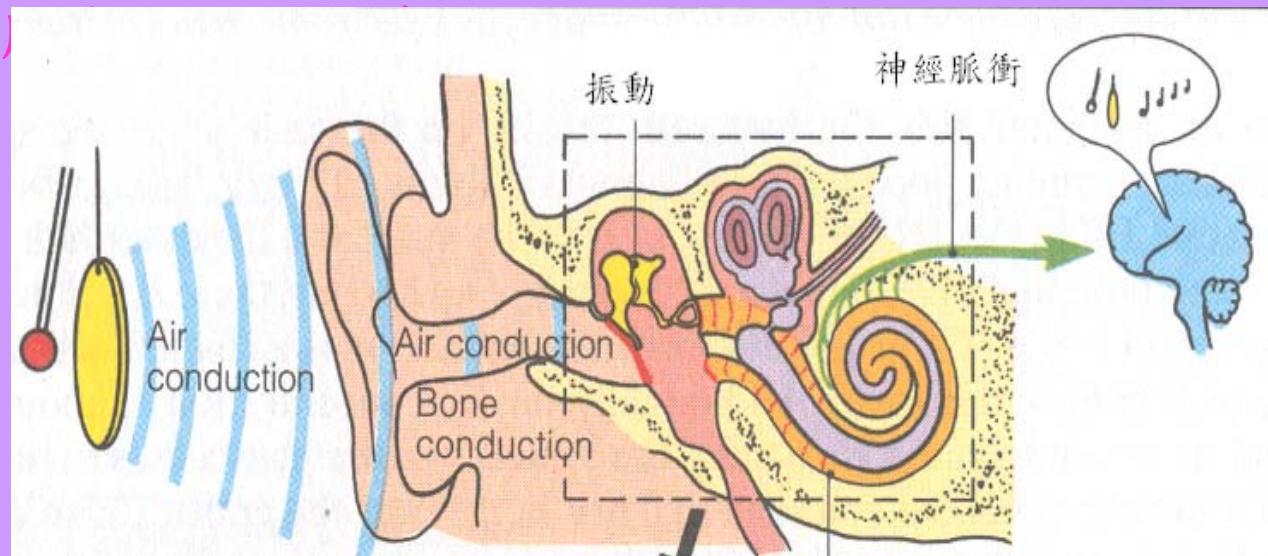

聽覺系統的結構

- ◆ 耳的結構及功能：
外耳
中耳
內耳
 - ◆ 聽覺系統各個部分共同運作，達到聽聲及保持身體平衡的功能。
- 聽覺器官
平衡器官

如何聽到聲音

- ◆ 聲波被耳殼收集，進入外耳道。
- ◆ 耳膜及與其相連的三塊小骨產生振動
- ◆ 振動再從中耳傳到內耳，並誘發神經脈衝傳至大腦。
- ◆ 大腦接收到神經脈衝，解譯為聲音。

日常生活的聲量

聲音來源	聲音強度	人的反應
噴氣式飛機、大炮發射	140(分貝)	痛苦
柴油發動機	120(分貝)	痛苦
大聲叫嚷、織布機	100(分貝)	煩躁
城市幹道、公共汽車	80(分貝)	厭煩
一般說話聲	60(分貝)	正常
圖書館閱覽室	40(分貝)	正常
輕聲耳語	20(分貝)	寧靜

聽覺系統毛病

於外耳，中耳及內耳，引致不同程度的聽聲問題：

- ◆ 外耳道-例如：異物，耳垢積聚，發炎
- ◆ 中耳毛病如：耳膜破損，中耳炎，中耳積水等
- ◆ 內耳問題如：內耳感染，遺傳，聲損傷，噪音，耳毒性藥物等

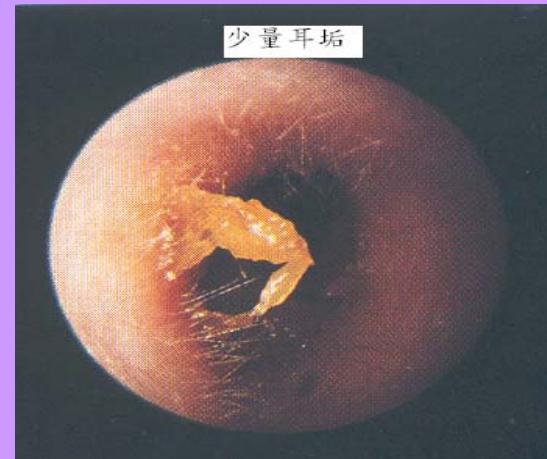

耳垢積聚

耳垢是外耳道的油脂分泌，有保護外耳道，吸住塵埃及外來異物，抑制細菌生長的作用。若過耳垢過多，便會阻塞外耳道。

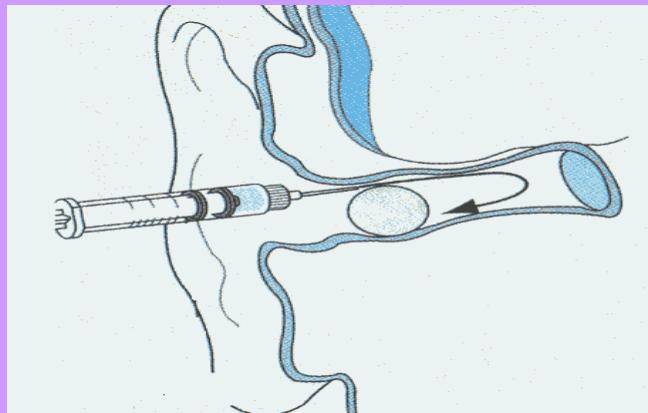

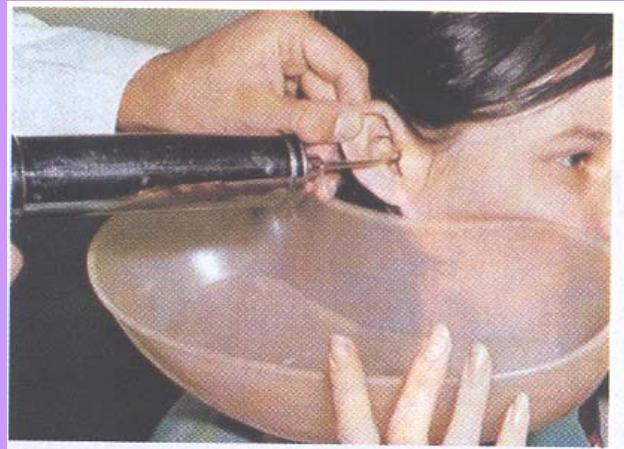

徵狀

- 耳朵被阻塞的感覺
- 可能引起耳痛
- 耳內發出嗝嗝的聲響
- 若95%的耳道被阻塞，聽聲亦會出現困難。

過多耳垢

- ◆ 清洗阻塞著外耳道的耳垢

Syringe is not painful, therefore pain

耳部創傷

耳的結構及功能：外耳

中耳 ----- 聽覺器官

內耳 ----- 平衡器官

耳朵：撕裂 - 小心處理皮膚及軟骨

處理方法：縫合，防止感染

撞傷 - 血腫

處理方法：穿刺放血

外耳道損傷：紗布覆蓋

鼓膜外傷及刺破：挖耳

壓力 - 爆破氣浪，掌拍，跳水，潛水

病徵 - 失聰，耳鳴，眩暈，小量出血

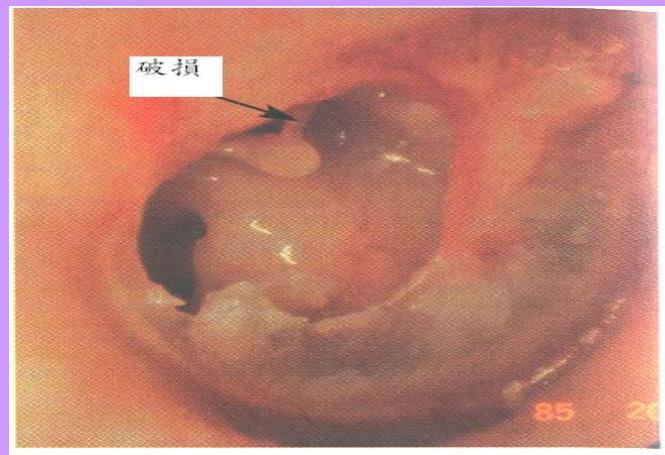

處理方法：防止感染及耳道入水

耳膜破損

耳膜因耳朵受到感染或
意外撞擊而破裂

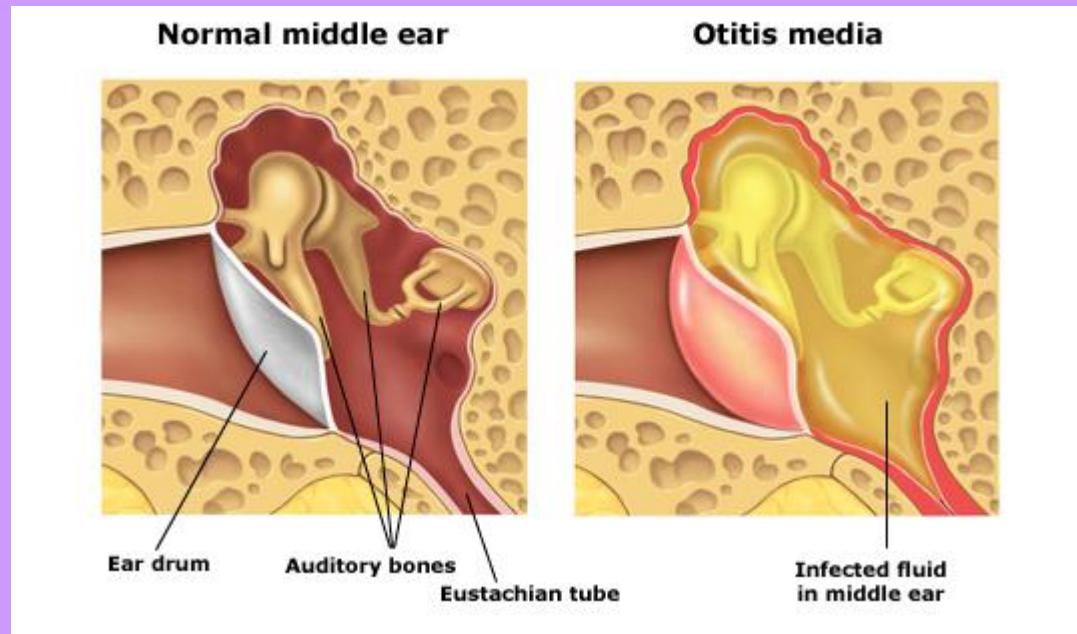

徵狀

- 耳痛
- 部份聽力減退
- 聽到耳朵有些嗚嗚聲
- 耳內輕微出血或有分泌物從
耳內流出

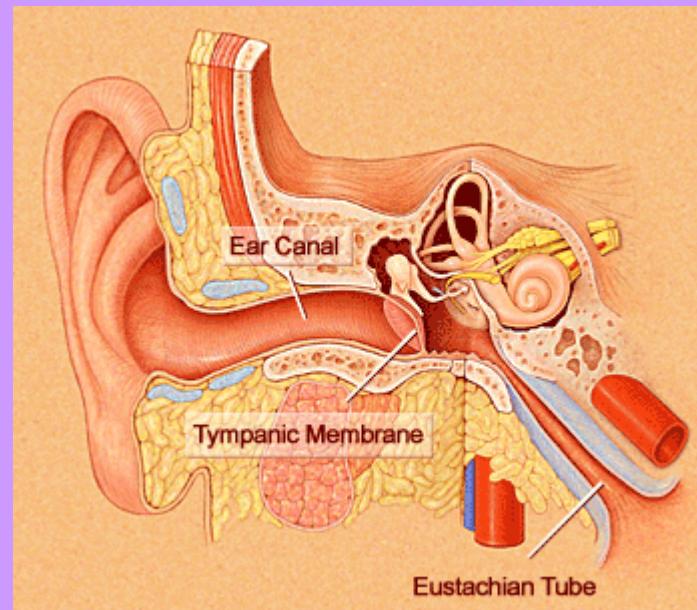

中耳炎

- ◆ 分急性及慢性
- ◆ 需同時處理鼻患

Barotrauma

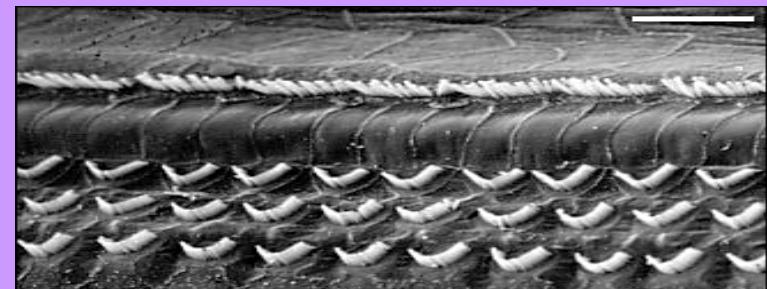

噪音

大型引擎、槍械和高聲浪的音樂產生過高噪音，損壞耳蝸內的聽覺細胞。

徵狀

- ◆ 耳朵有堵塞的感覺
- ◆ 耳鳴
- ◆ 聽聲能力慢慢下降

正常的聽覺細胞是整齊地排列

聽覺細胞受到噪音損壞

其他引致聽覺問題之原因

- ◆ 心血管疾病、高血壓、高膽固醇、高三甘油脂—令輸送至內耳的血液不充足
- ◆ 腦膜炎—包裹腦部及脊椎的薄膜出現炎症
- ◆ 自身免疫性疾病—引起耳炎及損壞神經線
- ◆ 肺結核(肺癆)—病症及使用之藥物導致損壞
- ◆ 關節炎及血管炎—血管異常
- ◆ 敏感—影響耳咽管功能，引起中耳積水或內耳問題。

弱聽的影響

- ◆ 沟通困難, 影響學習
- ◆ 警覺性下降：車聲, 電話鈴聲
- ◆ 情緒受困擾, 挫折感
- ◆ 降低對娛樂的享受, 大自然的美妙聲音

處理失聰/弱聽

- ◆ 醫學檢查, 找出原因
- ◆ 治療方案及根治
- ◆ 保護及預防

處理失聰/弱聽

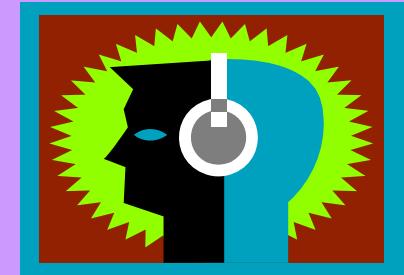

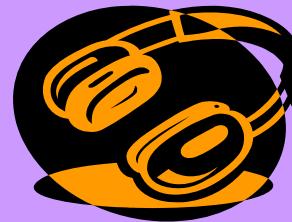

治療

- ◆ 藥物
- ◆ 輔助: 助聽器(擴音技術)
- ◆ 外科手術

處理失聰/弱聽

保護及預防

- ◆ 切勿利用異物撩耳
- ◆ 避免耳朵受過高的聲響刺激。當操作發出高噪音的機械時，必須配戴合適護耳裝備。

保護及預防

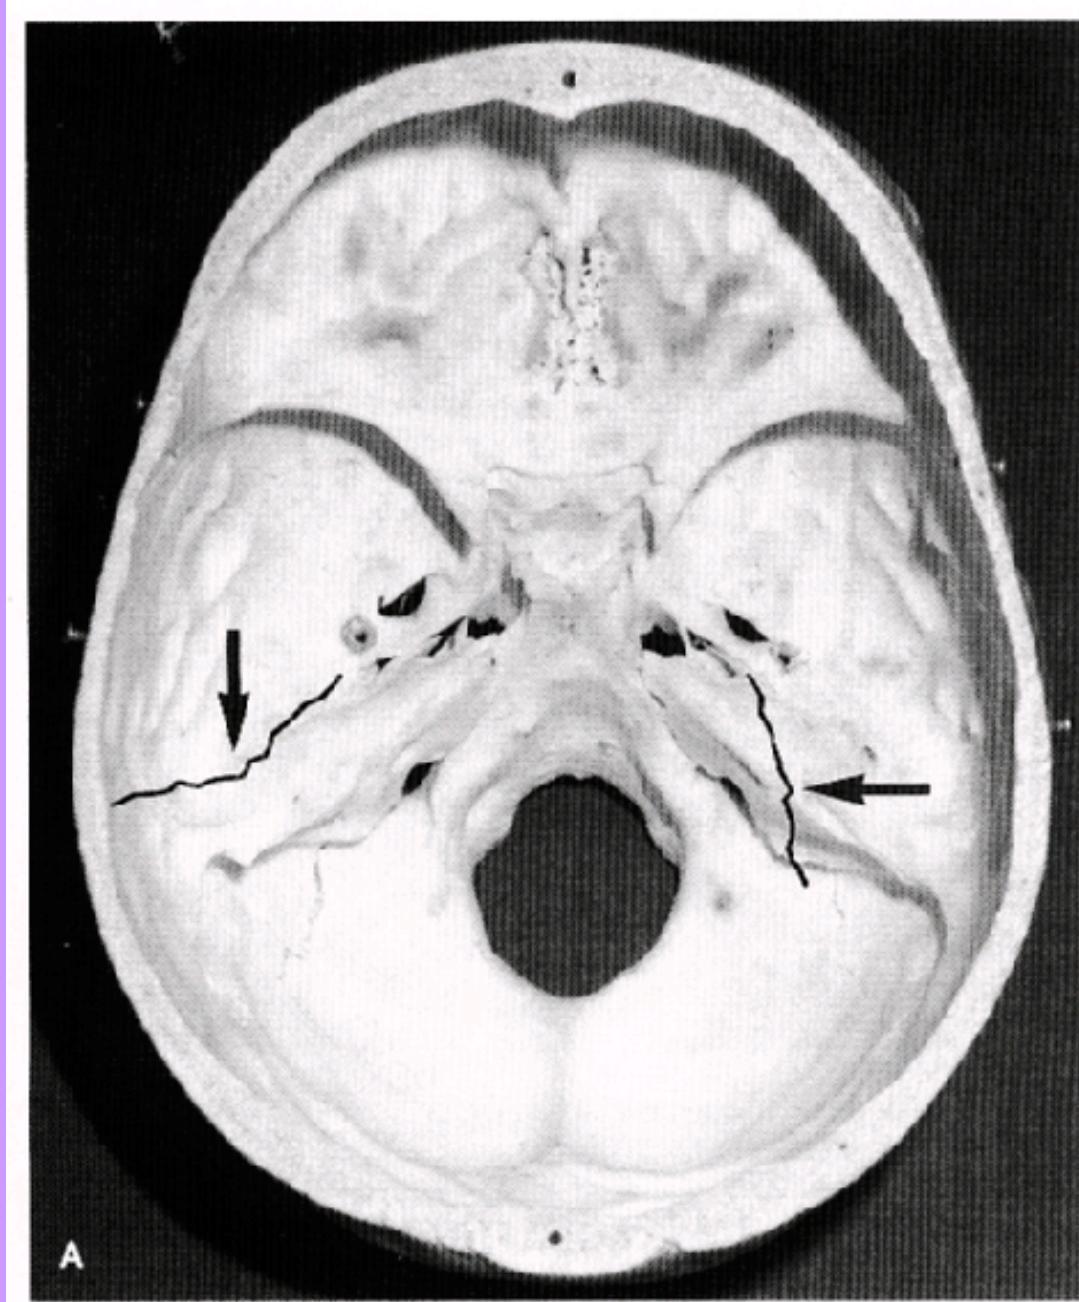

- ◆ 飲食要均衡，攝取足夠營養。

進行適量運動。

- 
- 顱骨骨折 -
 - 撞擊, 交通意外
 - 頭顱底骨折一部份，
傷者常有腦組織、胸、腹等損傷
 - 縱行骨折 80 %
 - 橫行骨折 20 %
 - 病徵：失聰、眩暈、流血
 - 包紮送醫院處理

Rhinitis 鼻膜炎

- ◆ Types:
 1. Allergic
 2. Vasomotor
 3. Infective
- ◆ All have inflamed nasal mucosa
- ◆ Similar nasal symptoms such as running nose, discharges, nasal obstruction
- ◆ Improve with decongestant and anti-histamine
- ◆ Should distinguish amount them because management is different

Allergic rhinitis

- ◆ 2 types and related allergens:
 1. Seasonal (Hay fever): pollens
 2. Pernnial: molds, house-dust mites, animal danders, house dust, food (milk products, preservatives, chocolate, pea nut etc.)

Allergic Rhinitis

- ◆ Symptoms presentation:
 - Typically : running nose, nasal obstruction, sneezing, itchiness in nose & eyes
 - Others : cough, throat discomfort, smell impairment, headache, wheezing, hearing impaired etc,
- ◆ Diagnosis--History in most important (symptoms and times of occurrence, exposure, pets, food environment, family history etc.)
- ◆ Lookout for conditions associated e.g. sinusitis, otitis media, nasal polyps, sleeplessness (sleep apnoea), asthma, epistaxis
- ◆ Investigation: to identify the specific allergens that cause the inflammation by skin test or specific IgE in the blood

Allergic Rhinitis Management

- ◆ Quality of life is to be addressed in management.
- ◆ Avoidance is the best form of treatment
- ◆ Pharmacotherapy:-
 - Short-acting antihistamines-OTC drugs e.g. Piriton
 - Longer acting antihistamines- sedating, non-sedating (Telfast, Clarityne, Xyzal etc.)
 - Nasal sprays: corticosteroid, saline
 - Decongestant: sympathomimetics
 - Leukotriene receptor antagonist: Singulair

Allergic Rhinitis-management

- ◆ Immunotherapy- Allergy shots or sublingual drops may consider if allergen can't be avoided and symptoms are hard to control
- ◆ Surgery- good for removing obstruction e.g. hypertrophic turbinates or deviated nasal septum

Vasomotor Rhinitis (Non-allergic rhinitis)

- ◆ Appears to be imbalance in the function of nerves that make mucous glands secrete fluid and which cause blood vessels to swell or contract
- ◆ Complains of blockage, running nose, postnasal drip or even sneezing and itching
- ◆ Aggravate by temperature and humidity changes, or exposure to irritants such as cigarette smoke, perfumes, air pollutants, and even by diets and stress
- ◆ Rule out allergies, sinuses infection, polyps and deviated nasal septum
- ◆ Drugs for symptoms; Surgery for anatomical correction

Infective Rhinitis

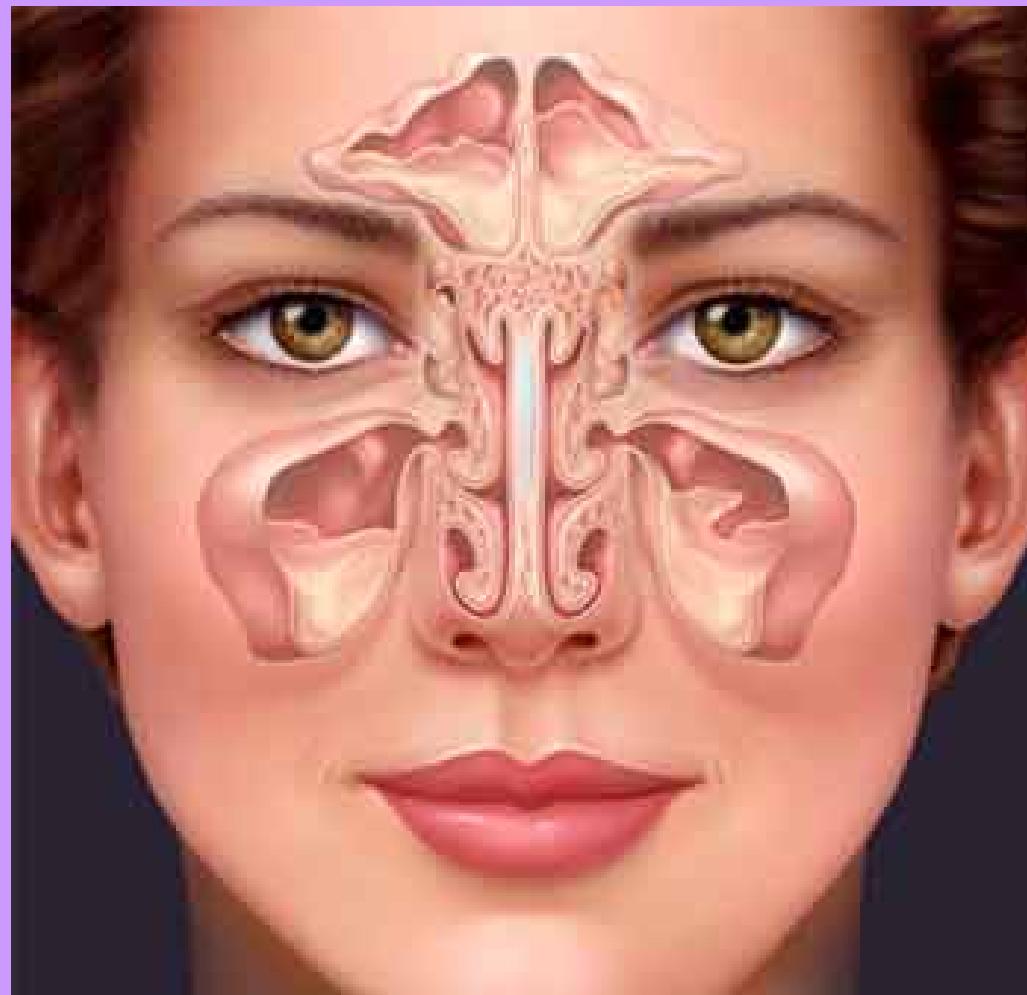

Acute rhinitis

- Usual viral infection (as in coryza, influenza)
- Present with generalized malaise, headache, nose blockage or dryness, nasal discharges may become yellow
- Complications: sinusitis, otitis media, acute bronchitis
- Treatment: rest, wear mask, avoid crowded public areas, symptomatic and supportive treatment

Sinusitis 鼻竇炎

- ◆ Acute sinusitis occurs as complication of acute rhinitis or common cold, with congestion around the sinuses openings blocking the drainage from the sinuses
- ◆ In children, foreign body, enlarged adenoid may be the causes
- ◆ In adult, it may be related to nasal polyps, deviated nasal septum, nasal tumor or dental causes
- ◆ Other causes include air pollutants, cigarette smoke, crowded areas, irritants like chlorine in pools diving, aspirin

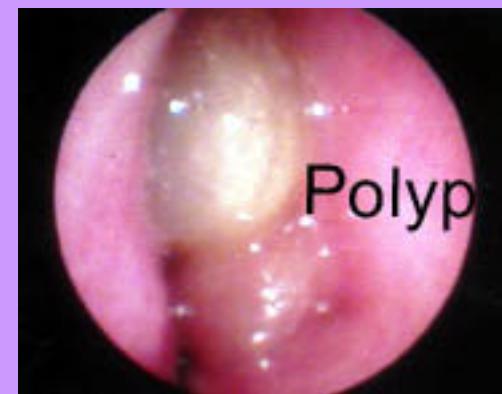

Sinusitis

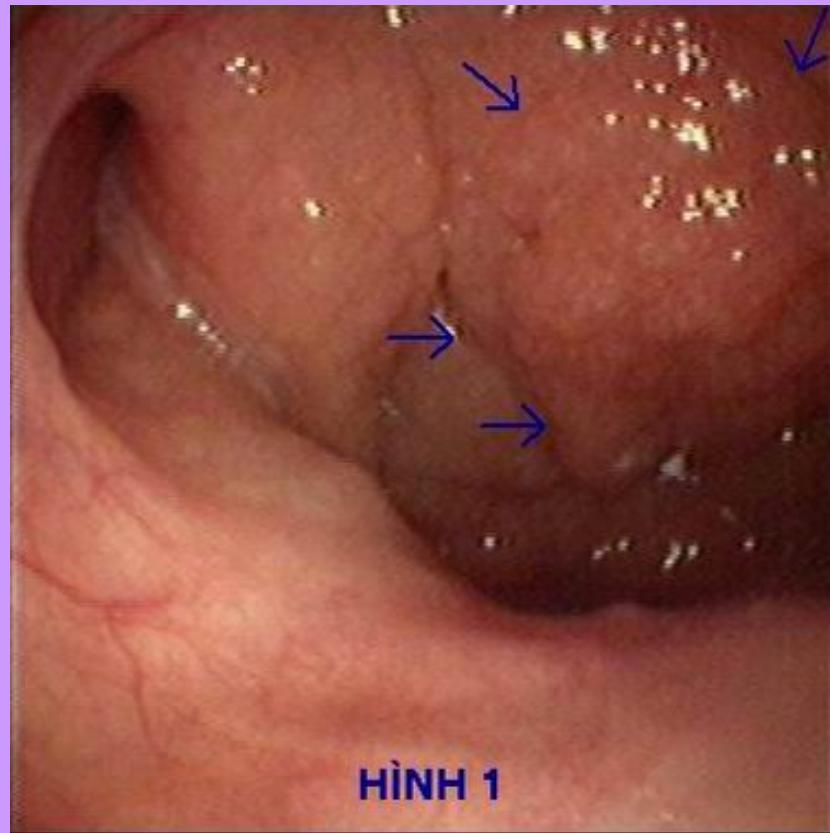

- ◆ Symptoms: nasal obstruction, purulent discharges, postnasal discharges, cheek & tooth pain, headache
- ◆ Management: Medical drainages with drugs (decongestant, antibiotics, saline spray, steroid nasal spray)
- ◆ Assessment with nasal endoscopy, X-rays/CT if not improve in 2 to 3 weeks
- ◆ Surgery is considered if medical treatment fails to remove obstruction and improve drainages of the sinuses

Adenoid and sinusitis

Dental injuries

- ◆ 軟組織
- ◆ 硬組織, 骨: tooth, mandible, zygoma

Dental injuries

Dental Trauma

Displacement of a tooth

- ◆ Avulsion
 - Complete displacement of tooth out of socket.
 - The periodontal ligament is severely traumatized and fracture of the alveolus may occur.
- ◆ Concussion
- ◆ Subluxation
- ◆ Lateral Luxation
- ◆ Intrusion
- ◆ Extrusion

Management of tooth displacement
